PROFESSIONAL SUMMARY

Details-oriented Full Stack Developer and Backend Architect with deep competency in designing highly scalable, decoupled, and transactionally secure distributed systems. Specialized in Domain-Driven Design (DDD), CQRS architectures, Event Sourcing, and asynchronous microservices communication. Proven capability in optimizing payment gateways (Stripe Connect, Paymongo) and engineering AI/ML integrations (LangChain agents).

TECHNICAL SKILLS & COMPETENCIES

Architectural Design: Domain-Driven Design (DDD), CQRS, Event Sourcing, Event-Driven Architecture (EDA), Microservices, Inbox-Outbox, Saga Pattern

Backend & Databases: NestJS, Node.js, Express, Django, RabbitMQ, PostgreSQL, MongoDB, MySQL, Redis, Docker, C++, Java, Git, GitHub

Frontend & UI Frameworks: Next.js, React, HeroUI, Ant Design, HTML5, CSS3, Tailwind, Material UI (MUI)

Libraries & Validation: React Hook Form, Zod, Postman APIs, RESTful Integrations

Payment Integrations: Stripe, Razorpay, Paymongo Philippines API

KEY TECHNICAL PROJECTS

Inbox-Outbox Pattern Messaging Broker [NestJS, RabbitMQ, PostgreSQL, Microservices]

- Engineered a transactionally secure events pipeline utilizing the Inbox-Outbox pattern to guarantee at-least-once message delivery across microservices.
- Eliminated data inconsistencies caused by database transaction failures during external broker publishing.
- Designed a polling publisher that queries database outbox entries and publishes to RabbitMQ topic exchanges.

Event Sourcing & CQRS Engine [NestJS, CQRS Module, Event Sourcing, TypeScript]

- Built an event-sourced proof-of-concept backend tracking state transitions as a chronological sequence of immutable event logs.
- Implemented Command Query Responsibility Segregation (CQRS) to isolate read and write workloads, optimizing database indexing.
- Created event replay capabilities, allowing audit logging, historical time-travel analysis, and system state reconstructions.

C++ Custom Web Crawler [C++, Sockets, Custom Data Structures]

- Built a high-performance web crawler in raw C++ using my own generic string, linked list, and hashmap libraries.
- Avoided standard library string methods and external dependencies to guarantee absolute control over memory allocations and data structures.
- Designed the socket crawler architecture for low-level efficiency, automated recursion, and zero unnecessary runtime overhead.

Custom C++ Library Suite [C++, Templates, Memory Management]

- Designed and engineered generic C++ data structure and utility libraries from scratch.
- Implemented custom HashMap, LinkedList, and String classes with manual pointer tracking and optimized search-complexity bounds.
- Wrote robust memory cleanup handlers, copy/move constructors, and templates to support plug-and-play generic types.

Distributed LinkedIn Clone [Node.js, React, Express, MongoDB, WebSockets]

- Developed a full-featured social clone to explore scalable backend messaging, connection search graphs, and real-time feed updates.
- Integrated client-side state managers and WebSocket servers for dynamic post feeds and instant notification push cycles.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Zenmonk Software & Services

(Feb 2026 - Current)

- Engineered scalable microservices using NestJS, Next.js, React, and TypeScript.

- Implemented core system designs including Domain-Driven Design (DDD) and CQRS to decouple service workloads.
- Designed and executed Event Sourcing ledgers and transactionally secure event brokers using the Inbox-Outbox pattern with RabbitMQ.
- Orchestrated multi-service local deployments, containerizing subdomains using Docker for isolated processing.

Node.js Developer | Techbuilder

(Nov 2025 - Feb 2026)

- Developed backend service microservice API modules utilizing Node.js and Express.
- Integrated Stripe Connected Account architectures handling split vendor ledger balances, payouts, and escrows.
- Integrated localized GCash, GrabPay, and credit card API processing gateways using the Paymongo Philippines API.
- Standardized integration profiles, writing schema tests and validating request routes using Postman.

MERN Stack Intern | CodeQuotient Academy

(Feb 2025 - Nov 2025)

- Built responsive full-stack applications using MongoDB, Express, React, and Node.js (MERN) stack.
- Mastered core computer science principles and data structures, completing over 120+ challenges on LeetCode using C++.

ACHIEVEMENTS & LEADERSHIP

- **1st Place – On-Spot Coding (Zerone24 IT Fest):** Solved complex algorithmic puzzles under strict time limits.
- **2nd Place – On-Spot Debugging (Zerone24 IT Fest):** Diagnosed and resolved runtime errors and vulnerabilities in real time.
- **NCC Cadet (National Cadet Corps):** Completed physical and team training, instilling leadership, discipline, and execution values.
- **NSS Volunteer (National Service Scheme):** Led social service programs and civic outreach campaigns, building community engagement skills.
